

CVWO

Execution Plan

- Basic features:
 - CRUD
The addition, deletion, edition, and viewing of tasks
 - Tags
Considerations:
 - Having a list of all tags the user has used (with the number of tasks in each tag)
 - Search
The search feature will return keywords and tags that match the user input.
- Additional features to consider:
 - Marking tasks as done
 - Adding deadlines
 - Adding a progress bar and sub-tasks
Where some tasks are too large to mark as complete at once, these tasks can be divided into sub-tasks. A progress bar will be shown to mark the status of the overall task.
 - Adding overall statistics (number of tasks in each tag, number of undone tasks, etc)
 - Adding goals
E.g. Marking 30 tasks as done
Completing 10 tasks marked with a specific tag (e.g. #HW)
- Brief timeline:
December: Learn and get familiar with Ruby
January Week 1-2: Complete CRUD and UI
January Week 3: Complete tagging and search
January Week 4: Complete selected additional tasks
